Coding Guidelines

- Primary Dx is based on condition most related to the POC. It may or may not be related to a recent hospital stay
- Use "Aftercare" when neither the Acute Condition nor any Complication present.
- Secondary diagnoses: any coexisting conditions that may affect treatment, care, response to treatment, or rehab prognosis.
- Comorbidities that should be included: DM, HTN, COPD, CAD, CHF, PVD, Late Effects of CVA, Cancer and History of CA, Blindness, Amp Status, Dementias, and chronic diseases such as Parkinson's.
- Sequencing of diagnoses: Primary focus --> comorbidities --> other V and E codes at bottom of list.
- Etiology and Manifestation codes must be paired; Etiology first followed immediately by Manifestation code.
- Palm Tip: Use "ICD-9 Book" tab and Number tabs, "V" tab, or "E" tab to quickly scroll through a range of codes.
- Diagnosis codes with an "x" means additional digit(s) needed. Diagnoses with "+" : 2 codes required.
- ⊙ = case-mix diagnosis; ⊙² = Manifestation case-mix diagnosis
